

MicroComm DXI

DXI Keyboards

Description

DXI keyboards are used with Service, Administration and Control (SAC) computers. They are available in various styles to meet location and environmental considerations.

All keyboards are a PC compatible 101 key style that includes 12 dedicated function keys, a numeric keypad, and a scroll keypad.

Desktop keyboards may be ordered as either standard, narrow, or rugged models. The narrow version has the keys arranged so that the keyboard width is only 16" for use in tight locations or mounting in a drawer.

Rack mount keyboards are mounted in a slide out drawer that includes a pull handle and key lock.
