

MicroComm DXL

ADM-SOF
DXL System Software

Description

The DXL System Software CD package contains the MicroComm DXL Configuration, Logging, and Diagnostic application. This program runs on standard IBM PC compatible hardware and is used to:

- manipulate the configuration of DXL systems,
- review and control the logs generated by the system, and
- view the diagnostic information produced by the system

The DXL Administrator application consists of four main modules; the Shell, the Configuration Module, the Logging Module, and the Maintenance Module. These four modules are nearly independent parts of a single Windows application.

A standard windows installer will install this application. In the process, it will create an application directory to hold the application and all its data subdirectories.

Features

- windows based user interface makes inputting configuration data easy and intuitive
- configuration software allows the system operation to be changed for different times of the day

Ordering Information

Part Number ADM-SOF

Specifications

Minimum System

CPU	Intel Pentium or higher
Operating System	Windows XP, Vista, 7, 8, 10, 11
RAM	256 Mbytes or more (depends on OS)
Hard Drive	128 Mbytes free
Video	1024x768 or higher resolution
Pointing Device	Mouse or other pointing device

Requirements for Online Operation

Communication	Ethernet network interface or V.90 modem or RS232 serial port (serial port not supported on Windows Vista and above)
---------------	---

Optional Feature Requirements

Microphone	Required for message recording
------------	--------------------------------
